SUMMARY

Results-oriented AI-Driven Software Architect & Full-Stack Systems Engineer with a proven track record of designing high-scale web and mobile ecosystems. Specialized in leveraging advanced AI-assisted engineering workflows to scaffold, audit, and deploy production-grade software at 4x traditional development velocity. Expert in implementing zero-trust security architectures (AES-256-CBC), real-time distributed microservices, and multi-tenant systems. Adept at turning complex infrastructure bottlenecks into highly scalable, optimized user experiences.

WORK EXPERIENCE [\[You Can Verify All These Projects Here\]](#)

Principal Systems Architect

Jan 2025

- **Architected & Hardened a Multi-Tenant SaaS Engine:** Engineered a high-throughput Express 5 monolith utilizing an AI-driven advanced development framework to scaffold backend routing and execute static structural analysis.
- **Distributed State & Horizontal Scaling:** Deployed Redis Pub/Sub core clustering alongside custom distributed adapters to handle seamless multi-server real-time streaming, abstracting session storage into an independent stateless MongoDB persistence layer via connect-mongo.
- **Zero-Trust Production Security Grid:** Implemented advanced cryptographic barriers including AES-256-CBC encryption for low-level server-side data vaults, CSRF double-submit tokens backed by crypto.timingSafeEqual(), and isolated 4-layer rate-limiting pipelines to mitigate DDoS vectors.
- **Storage & Ephemeral Asset Pipeline:** Developed an automated media ingestion pipeline leveraging Cloudflare R2 (S3 API) for media uploads, alongside a 30-minute background cron task (previewCleanup.js) that safely destroys expired live-preview assets from global edge nodes within 24 hours.
- **Threat Telemetry & Runtime Verification:** Configured automated server audits integrating ClamAV daemon processing to block malicious injection vectors at the buffer stage, routing structural execution logs to a custom Monospace Cyberpunk Ops Center using Socket.IO telemetry.

LEAD MOBILE & PLATFORMS ENGINEER | [\[You Can Verify All These Projects Here\]](#)

March 2025

- **AI-Engineered Code Generation & Patching:** Built Pulse AI, a dual-path platform optimization system running via a shared provider-agnostic completion layer (Groq SDK & Gemini API) that programmatically computes structural patches, context classification, and automated semantic fallbacks directly into remote GitHub services.
- **Hardware-Backed Mobile Cryptography:** Designed the security schema for Rendfile (Play Store Candidate), deploying an Android-native Zero-Knowledge Architecture using flutter_secure_storage to isolate encryption keys inside the device's hardware Keystore[cite: 7, 8].
- **Advanced Data Isolation & Anti-Reversing:** Engineered a Decoy Vault subsystem using dual-state PIN verification logic, while implementing strict screen-capture shielding (FLAG_SECURE), code obfuscation pipelines (--obfuscate), and proactive root/jailbreak detection layers[cite: 7, 8].
- **High-Velocity Data Transfer Protocols:** Devised an offline-first WiFi P2P data engine utilizing WiFi Direct (P2P) to yield 200MB/s transmission rates, integrated with client-side task queue persistence via IndexedDB and localStorage[cite: 5, 8].

TECHNICAL SKILLS & TOOLKIT [\[Learn More About This Here\]](#)

- **Languages:** JavaScript (ES6+), TypeScript, Dart, Node.js, HTML5/CSS3.
- **Mobile Frameworks:** Flutter Ecosystem, React Native.
- **Backend & Distributed Systems:** Express 5, Redis (Pub/Sub Networks), BullMQ, Socket.IO.
- **Databases & Layer Storage:** MongoDB (Mongoose), Cloudflare R2 / AWS S3 object storage.
- **Security & Cryptography:** AES-256-GCM/CBC, Android Keystore System, ClamAV Daemon, CSRF/NoSQL Sanitization.

- **AI & Automation Systems:** Groq SDK, Gemini API, Automated Git Patching.
- **Payments & Integrations:** Stripe Elements & Webhooks API, Shopify Liquid.
- **Growth & Media Tools:** TikTok Ads Manager, Facebook Ads, SEO Analytics, Audio/Visual Production Tools.

EDUCATION

- **Matric :** Bilal Education Academy timergara July 2022
- **FSC/ Computer Science** Govt College Nawagi bajaur August 2024
- **BS Computer Science** International Islamic University Islamabad 2026/ present

ADDITIONAL SKILLS

- **Advanced AI Workflows:** Prompt Engineering for Software Verification, Responsible AI Utilization, and Context-Aware Brainstorming for System Architecture (Google Certified).
- **E-Commerce Engineering:** Custom Shopify Store Designing, Theme Customization, and E-Commerce Product Selling Operations (Shopify Certified).
- **Digital Growth & Marketing:** Full-Stack Technical SEO for Websites, High-ROAS Campaign Management, and Data-Driven Performance Marketing (TikTok Ads, Facebook Ads).
- **Creative Technology & AI Media:** High-End Video Editing, AI Video Creation & Synthetic Media Pipelines (HeyGen), Graphic Designing via Generative AI, and Technical Audio Engineering.

CERTIFICATIONS [\[Learn More Here\]](#)

- **AI for Brainstorming :** Google Career Certificate From Coursera// [Verify Here](#)
- **How to Use Ai Responsibly :** Google Career Certificate.....// [Verify Here](#)
- **Shopify Store Architecture / Designing:** From Local Course

LANGUAGES

English: Professional Proficiency
Urdu Fluent
PASHTO: Fluent
